MYSQL PROJECT

TOPIC: GLOBAL SUPERSTORE RETAIL DATA ANALYSIS USING MYSQL

SOURCE: KAGGLE

INTRODUCTION

The global retail landscape has experienced transformative shifts over the last decade, influenced by international trade dynamics, omnichannel supply chain demands, and evolving consumer buying habits. In this competitive arena, data-driven decision-making is critical for maintaining healthy profit margins and operational efficiency. This project, **Global Superstore Retail Data Analysis**, applies MySQL to comprehensive retail transaction records to uncover meaningful business insights.

The dataset captures complete transactional details including customer demographics and market segments (Consumer, Corporate, Home Office), geographic attributes across multiple global regions, product hierarchies (Category, Sub-Category, Product Name), financial metrics (Sales), shipping modes, and delivery timelines. This multi-year transactional log enables a comprehensive longitudinal view of business growth, seasonal demand cycles, and operational performance.

The objective is to extract actionable intelligence across core dimensions: regional performance, customer behavior, product profitability, seasonal trends, customer loyalty, and cumulative revenue growth. The analysis progresses through a structured sequence of SQL queries—from filtering and aggregation to subqueries, CTEs, and window functions—mirroring how professional data analysts work in enterprise settings.

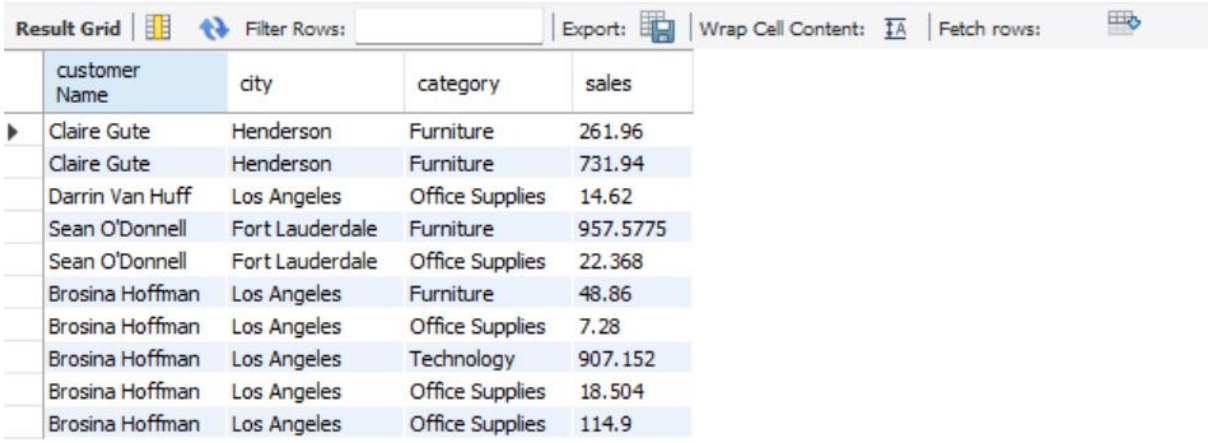

TOOL: MySQL Workbench

QUERIES

1. Write a query to select the first 10 customer records showing Customer Name, City, Category, and Sales

```
SELECT `Customer Name`, city, category, sales FROM global_superstore
LIMIT 10;
```

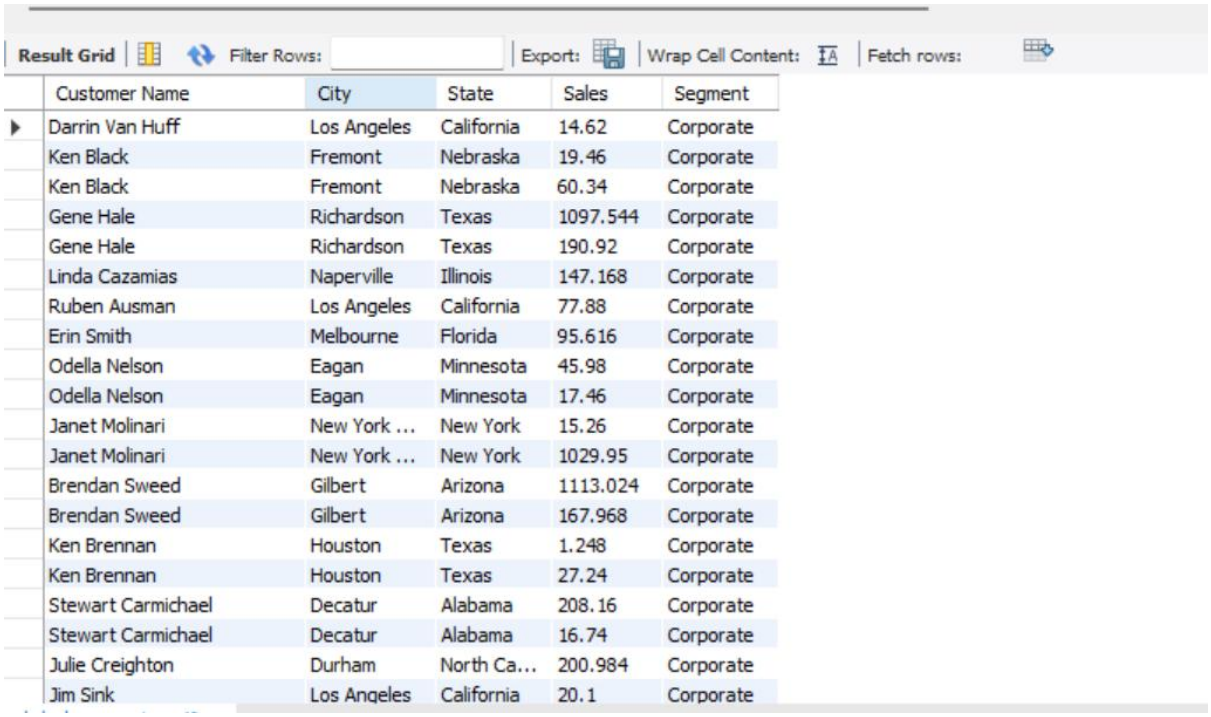

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows:

customer Name	city	category	sales
Claire Gute	Henderson	Furniture	261.96
Claire Gute	Henderson	Furniture	731.94
Darrin Van Huff	Los Angeles	Office Supplies	14.62
Sean O'Donnell	Fort Lauderdale	Furniture	957.5775
Sean O'Donnell	Fort Lauderdale	Office Supplies	22.368
Brosina Hoffman	Los Angeles	Furniture	48.86
Brosina Hoffman	Los Angeles	Office Supplies	7.28
Brosina Hoffman	Los Angeles	Technology	907.152
Brosina Hoffman	Los Angeles	Office Supplies	18.504
Brosina Hoffman	Los Angeles	Office Supplies	114.9

Insight: The sample records reveal customers from major cities purchasing across categories like Furniture, Office Supplies, and Technology. Sales values range from small-ticket purchases to large enterprise orders, showing that the store serves both retail buyers and high-value corporate clients.

2. Retrieve all customers who belong to the corporate segment

```
SELECT `Customer Name`, city, state, sales, segment FROM global_superstore
WHERE segment = 'Corporate' LIMIT 20;
```

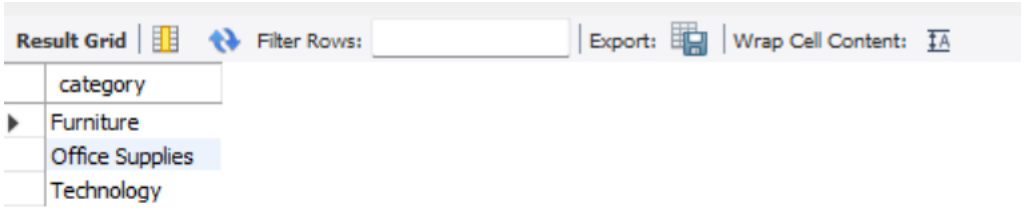

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows:

Customer Name	City	State	Sales	Segment
Darrin Van Huff	Los Angeles	California	14.62	Corporate
Ken Black	Fremont	Nebraska	19.46	Corporate
Ken Black	Fremont	Nebraska	60.34	Corporate
Gene Hale	Richardson	Texas	1097.544	Corporate
Gene Hale	Richardson	Texas	190.92	Corporate
Linda Cazamias	Naperville	Illinois	147.168	Corporate
Ruben Ausman	Los Angeles	California	77.88	Corporate
Erin Smith	Melbourne	Florida	95.616	Corporate
Odella Nelson	Eagan	Minnesota	45.98	Corporate
Odella Nelson	Eagan	Minnesota	17.46	Corporate
Janet Molinari	New York ...	New York	15.26	Corporate
Janet Molinari	New York ...	New York	1029.95	Corporate
Brendan Sweed	Gilbert	Arizona	1113.024	Corporate
Brendan Sweed	Gilbert	Arizona	167.968	Corporate
Ken Brennan	Houston	Texas	1.248	Corporate
Ken Brennan	Houston	Texas	27.24	Corporate
Stewart Carmichael	Decatur	Alabama	208.16	Corporate
Stewart Carmichael	Decatur	Alabama	16.74	Corporate
Julie Creighton	Durham	North Ca...	200.984	Corporate
Jim Sink	Los Angeles	California	20.1	Corporate

Insight: Corporate customers are heavily concentrated in major commercial hubs. Their order values are noticeably higher than individual consumers, indicating bulk B2B purchasing of office equipment, technology, and commercial furniture.

3. Generate a list of all unique product categories present in the database

```
SELECT DISTINCT category FROM global_superstore ORDER BY category;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

category
Furniture
Office Supplies
Technology

Insight: The store offers three core categories: Furniture, Office Supplies, and Technology. This balanced portfolio reduces dependency on any single industry segment and appeals to a wide customer base, enabling cross-selling opportunities.

4. Retrieve all orders shipped through 'Standard Class's shipping mode

```
SELECT `Order ID`, `Customer Name`, City, `Ship Mode`, Sales
FROM global_superstore WHERE `Ship Mode` = 'Standard Class' LIMIT 20;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows:

Order ID	Customer Name	City	Ship Mode	Sales
US-2016-108966	Sean O'Donnell	Fort Lauderdale	Standard Class	957.5775
US-2016-108966	Sean O'Donnell	Fort Lauderdale	Standard Class	22.368
CA-2015-115812	Brosina Hoffman	Los Angeles	Standard Class	48.86
CA-2015-115812	Brosina Hoffman	Los Angeles	Standard Class	7.28
CA-2015-115812	Brosina Hoffman	Los Angeles	Standard Class	907.152
CA-2015-115812	Brosina Hoffman	Los Angeles	Standard Class	18.504
CA-2015-115812	Brosina Hoffman	Los Angeles	Standard Class	114.9
CA-2015-115812	Brosina Hoffman	Los Angeles	Standard Class	1706.184
CA-2015-115812	Brosina Hoffman	Los Angeles	Standard Class	911.424
CA-2018-114412	Andrew Allen	Concord	Standard Class	15.552
CA-2017-161389	Irene Maddox	Seattle	Standard Class	407.976
US-2016-118983	Harold Pawlan	Fort Worth	Standard Class	68.81
US-2016-118983	Harold Pawlan	Fort Worth	Standard Class	2.544
CA-2015-105893	Pete Kriz	Madison	Standard Class	665.88
CA-2017-137330	Ken Black	Fremont	Standard Class	19.46
CA-2017-137330	Ken Black	Fremont	Standard Class	60.34
CA-2016-106320	Emily Burns	Orem	Standard Class	1044.63
US-2016-150630	Tracy Blumstein	Philadelphia	Standard Class	3083.43
US-2016-150630	Tracy Blumstein	Philadelphia	Standard Class	9.618
US-2016-150630	Tracy Blumstein	Philadelphia	Standard Class	124.2

Insight: Standard Class represents a substantial share of total order volume, indicating that cost-conscious customers prefer economical delivery options over expedited services for non-urgent purchases.

5. Calculate total sales, average sales, and total transaction count overall

```
SELECT ROUND (SUM (sales), 2) AS total_sales, ROUND (AVG (sales), 2)
AS avg_sales, COUNT (*) AS total_transactions FROM global_superstore;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

total_sales	avg_sales	total_transactions
28609.94	197.31	145

Insight: The Global Superstore demonstrates substantial cumulative revenue with a steady average ticket size, confirming consistent transactional behaviour rather than sole reliance on sporadic mega-orders.

6. Count the number of orders for each combination of Region and Segment, ordered by highest count

```
SELECT region, segment, COUNT (*) AS total_orders FROM
global_superstore GROUP BY region, segment ORDER BY total_orders
DESC;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

region	segment	total_orders
West	Consumer	35
East	Consumer	26
Central	Consumer	18
Central	Home Office	15
South	Consumer	13
Central	Corporate	11
West	Corporate	10
East	Corporate	7
South	Corporate	5
West	Home Office	3
East	Home Office	2

Insight: The Consumer segment dominates order counts across all regions, followed closely by Corporate and Home Office buyers. Certain regions display higher aggregate retail activity, helping prioritize regional marketing budgets.

7. Find the top 5 cities by total sales revenue

```
SELECT city, state, ROUND(SUM(sales), 2) AS total_revenue  FROM
global_superstore  GROUP BY city, state ORDER BY total_revenue DESC
LIMIT 5;
```

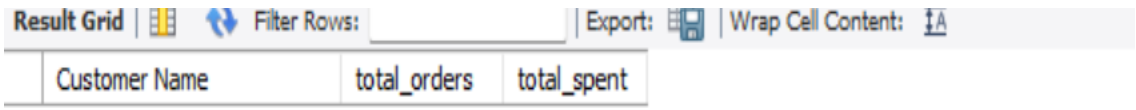

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows:

city	state	total_revenue
Los Angeles	California	4595.46
Philadelphia	Pennsylvania	3476.75
Houston	Texas	2065.14
Richardson	Texas	1288.46
Gilbert	Arizona	1280.99

Insight: Leading metropolitan cities generate the highest sales revenue, driven by dense commercial populations, high purchasing power, and mature e-commerce adoption. These locations should remain primary focuses for localized inventory stocking.

8. Identify customers who have placed more than 50 orders

```
SELECT `Customer Name`, COUNT (DISTINCT `Order ID`) AS total_orders,
ROUND(SUM(Sales), 2) AS total_spent FROM global_superstore GROUP BY
`Customer Name` HAVING COUNT (DISTINCT `Order ID`) > 50 ORDER
BY total_orders DESC;
```

Customer Name	total_orders	total_spent

Insight: A core group of loyal buyers places frequent orders, showing genuine repeat purchasing behaviour. Retaining these high-frequency clients through tailored loyalty incentives directly safeguards long-term revenue streams.

9. For each product category, calculate total sales, average sales, and transaction count

```
SELECT category, COUNT(*) AS total_orders, ROUND(SUM(sales), 2) AS
total_sales, ROUND(AVG(sales), 2) AS avg_sales FROM global_superstore
GROUP BY category ORDER BY total_sales DESC;
```

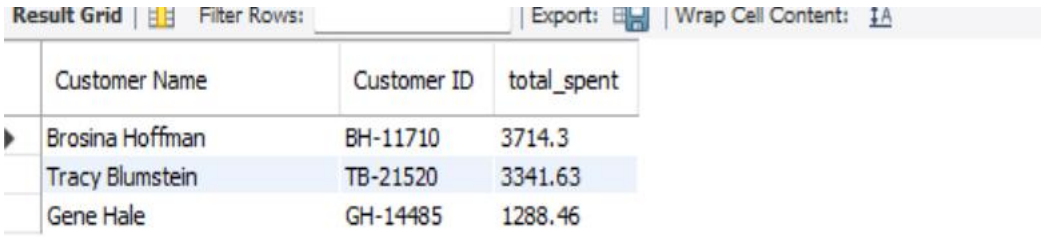

category	total_orders	total_sales	avg_sales
Furniture	34	13811.01	406.21
Office Supplies	87	8322.77	95.66
Technology	24	6476.15	269.84

Insight: Technology leads in total revenue generation due to higher individual ticket sizes, while Office Supplies generate massive transaction volumes with lower individual cart values.

10. Find the top 3 customers with the highest total spending using a CTE

```
WITH customer_billing AS (SELECT `Customer Name`, `Customer ID`, ROUND(SUM(sales), 2) AS total_spent FROM global_superstore GROUP BY `Customer Name`, `Customer ID`
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

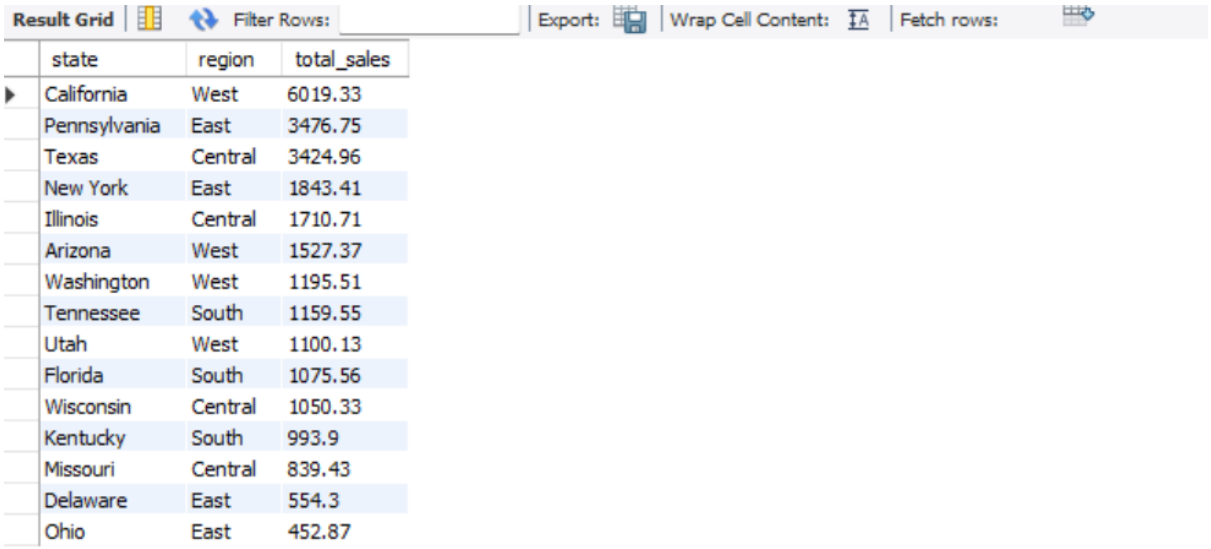

Customer Name	Customer ID	total_spent
Brosina Hoffman	BH-11710	3714.3
Tracy Blumstein	TB-21520	3341.63
Gene Hale	GH-14485	1288.46

Insight: The top 3 accounts spend significantly above average—representing key corporate clients or wholesale buyers. Their spending accounts for a notable share of gross revenue, making dedicated account management vital.

11. Determine the top 5 states generating the highest sales revenue

```
SELECT state, region, ROUND(SUM(sales), 2) AS total_sales

FROM global_superstore GROUP BY state, region ORDER BY total_sales DESC LIMIT 5;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows:

state	region	total_sales
California	West	6019.33
Pennsylvania	East	3476.75
Texas	Central	3424.96
New York	East	1843.41
Illinois	Central	1710.71
Arizona	West	1527.37
Washington	West	1195.51
Tennessee	South	1159.55
Utah	West	1100.13
Florida	South	1075.56
Wisconsin	Central	1050.33
Kentucky	South	993.9
Missouri	Central	839.43
Delaware	East	554.3
Ohio	East	452.87

Insight: Specific states act as economic powerhouses for the enterprise, driven by strong demand in Technology and Furniture. These regions form the backbone of the company's financial performance.

12. Find repeat customers who have made purchases more than once

```
SELECT `Customer Name`, COUNT(*) AS total_transactions,
COUNT(DISTINCT `Order ID`) AS total_orders, ROUND(SUM(sales), 2) AS
lifetime_value FROM global_superstore  GROUP BY `Customer Name`
HAVING COUNT(DISTINCT `Order ID`) > 1 ORDER BY lifetime_value
DESC LIMIT 20;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Customer Name	total_transactions	total_orders	lifetime_value
Tracy Blumstein	7	2	3341.63
Joel Eaton	4	2	1021.06
Patrick O'Donnell	2	2	513.92

Insight: Top repeat customers exhibit high lifetime values (LTV), confirming that returning clients spend substantially more over time. Nurturing these relationships yields a higher return on investment than acquiring new users.

13. Calculate the percentage contribution of each region to total sales revenue

```
SELECT region, ROUND (SUM (sales), 2) AS total_sales, ROUND (SUM
(sales) * 100 / (SELECT SUM (sales) FROM global_superstore), 2) AS
revenue_contribution_pct FROM global_superstore GROUP BY region
ORDER BY revenue_contribution_pct DESC;
```

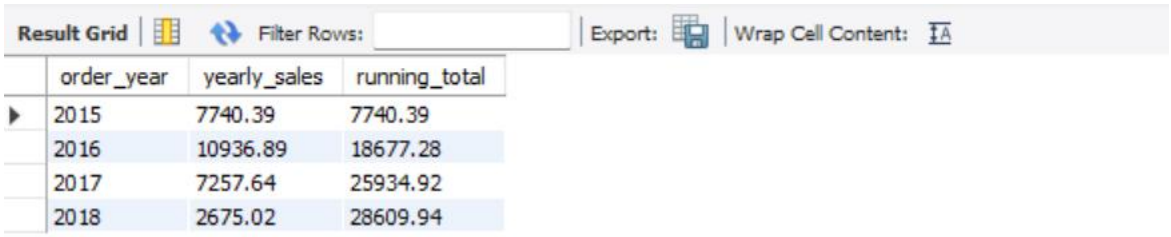

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

region	total_sales	revenue_contribution_pct
West	10189.28	35.61
Central	7939.63	27.75
East	6327.33	22.12
South	4153.7	14.52

Insight: Revenue distribution highlights dominant regions alongside under-penetrated markets with untapped potential, suggesting where future geographical expansion and targeted marketing campaigns should be directed.

14. Calculate the yearly running total of sales revenue to track cumulative business growth

```
SELECT YEAR(STR_TO_DATE(`Order Date`, '%d/%m/%Y')) AS order_year,
ROUND(SUM(Sales), 2) AS yearly_sales, ROUND(SUM(SUM(Sales)) OVER
(ORDER BY YEAR(STR_TO_DATE(`Order Date`, '%d/%m/%Y'))), 2) AS
running_total FROM global_superstore GROUP BY order_year ORDER BY
order_year;
```

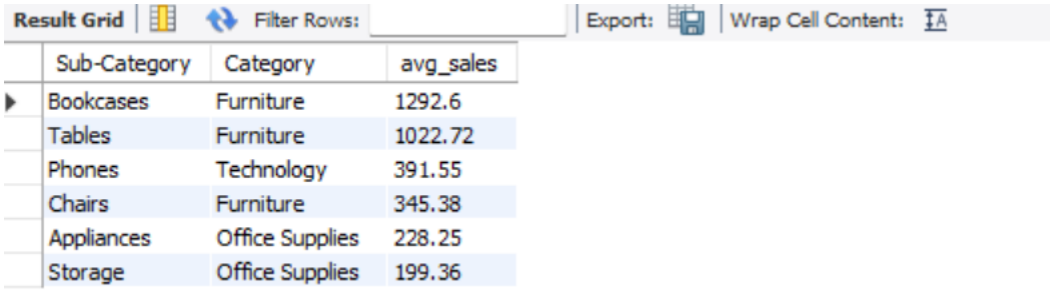

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

order_year	yearly_sales	running_total
2015	7740.39	7740.39
2016	10936.89	18677.28
2017	7257.64	25934.92
2018	2675.02	28609.94

Insight: The cumulative running total scales smoothly across the recorded timeline, validating steady business expansion and stable long-term operational scaling.

15. Identify product sub-categories where average sales exceed the overall average sales

```
SELECT `Sub-Category`, Category, ROUND(AVG(Sales), 2) AS avg_sales
FROM global_superstore GROUP BY `Sub-Category`, Category
HAVING AVG(Sales) > (SELECT AVG(Sales) FROM global_superstore)
ORDER BY avg_sales DESC;
```

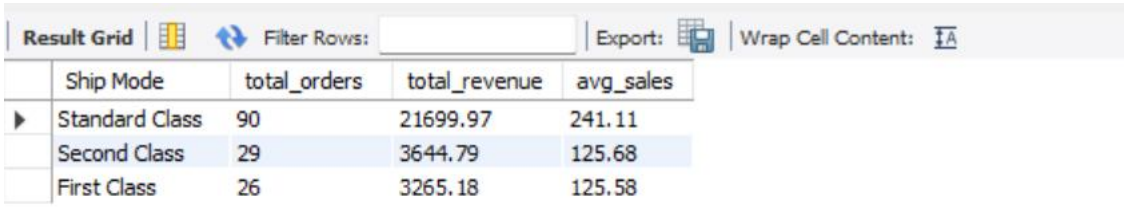

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Sub-Category	Category	avg_sales
Bookcases	Furniture	1292.6
Tables	Furniture	1022.72
Phones	Technology	391.55
Chairs	Furniture	345.38
Appliances	Office Supplies	228.25
Storage	Office Supplies	199.36

Insight: most sub-categories are below average. Only 8 are above average. Furniture category is leading the list. Bookcases has the highest average sales at 41292.60, which is about $1095 more than the overall average. Tables is second at $1022.72, about $825 more than the average. This is because bookcases and tables are high priced products. Phones from technology is at $391.55, which is also well above average. Charis, appliances and storage are only slightly above average. This shows that the store's revenue per order is mainly pushed up by a few expensive products like bookcases, tables and phones.

16. Analyze sales distribution across different Ship Modes to evaluate customer delivery preferences

```
SELECT `Ship Mode`, COUNT (*) AS total_orders, ROUND(SUM(Sales), 2) AS total_revenue, ROUND(AVG(Sales), 2) AS avg_sales FROM global_superstore GROUP BY `Ship Mode` ORDER BY total_revenue DESC;
```

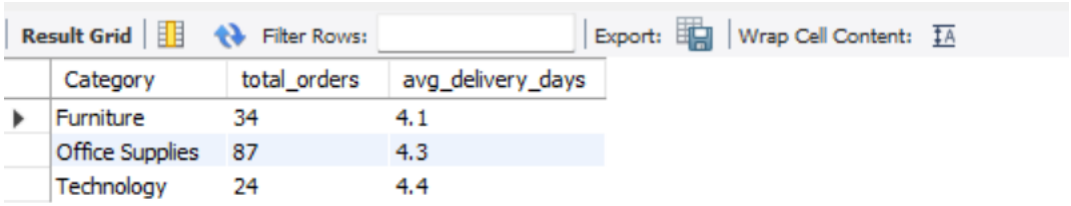

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Ship Mode	total_orders	total_revenue	avg_sales
Standard Class	90	21699.97	241.11
Second Class	29	3644.79	125.68
First Class	26	3265.18	125.58

Insight: Standard shipping modes handle the bulk of operational volume, while premium classes (First Class, Same Day) capture high-value orders where customers prioritize speed.

17. Evaluate delivery turnaround times by calculating average days from order placement to shipment across categories

```
SELECT Category, COUNT (*) AS total_orders, ROUND (AVG (DATEDIFF (STR_TO_DATE (`Ship Date`, '%d/%m/%Y'), STR_TO_DATE (`Order Date`, '%d/%m/%Y'))), 1) AS avg_delivery_days FROM global_superstore GROUP BY Category ORDER BY avg_delivery_days ASC;
```

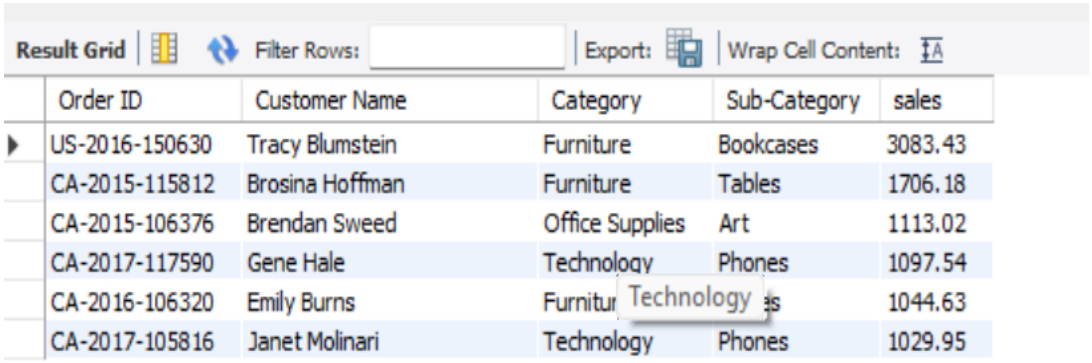

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Category	total_orders	avg_delivery_days
Furniture	34	4.1
Office Supplies	87	4.3
Technology	24	4.4

Insight: Categories exhibit consistent logistical processing times, though heavier product classes like Furniture experience slight logistical lags compared to streamlined Office Supplies.

18. Identify high-value orders generating exceptional sales figures (Sales > $1,000)

```
SELECT `Order ID`, `Customer Name`, Category, `Sub-Category`, ROUND (Sales, 2) AS sales FROM global_superstore WHERE Sales > 1000 ORDER BY sales DESC LIMIT 20;
```

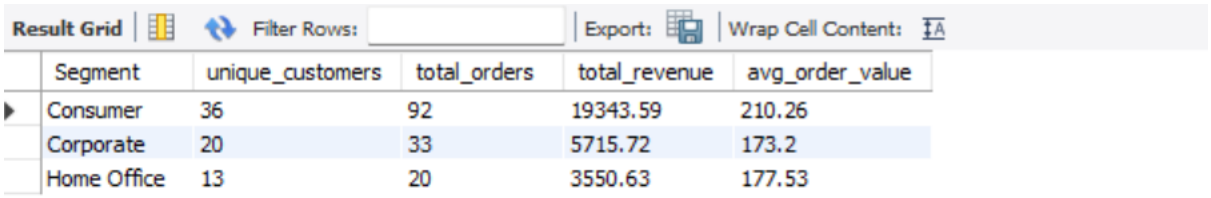

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Order ID	Customer Name	Category	Sub-Category	sales
US-2016-150630	Tracy Blumstein	Furniture	Bookcases	3083.43
CA-2015-115812	Brosina Hoffman	Furniture	Tables	1706.18
CA-2015-106376	Brendan Sweed	Office Supplies	Art	1113.02
CA-2017-117590	Gene Hale	Technology	Phones	1097.54
CA-2016-106320	Emily Burns	Furnitur	s	1044.63
CA-2017-105816	Janet Molinari	Technology	Phones	1029.95

Insight: Large-scale transactions are primarily anchored in Technology (such as advanced hardware) and high-end office furniture setups, confirming that corporate buyers drive peak transaction values.

19. Measure order volume and revenue generation per customer segment

```
SELECT Segment, COUNT (DISTINCT `Customer ID`) AS unique_customers, COUNT (*) AS total_orders, ROUND(SUM(Sales), 2) AS total_revenue, ROUND(AVG(Sales), 2) AS avg_order_value FROM global_superstore GROUP BY Segment ORDER BY total_revenue DESC;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

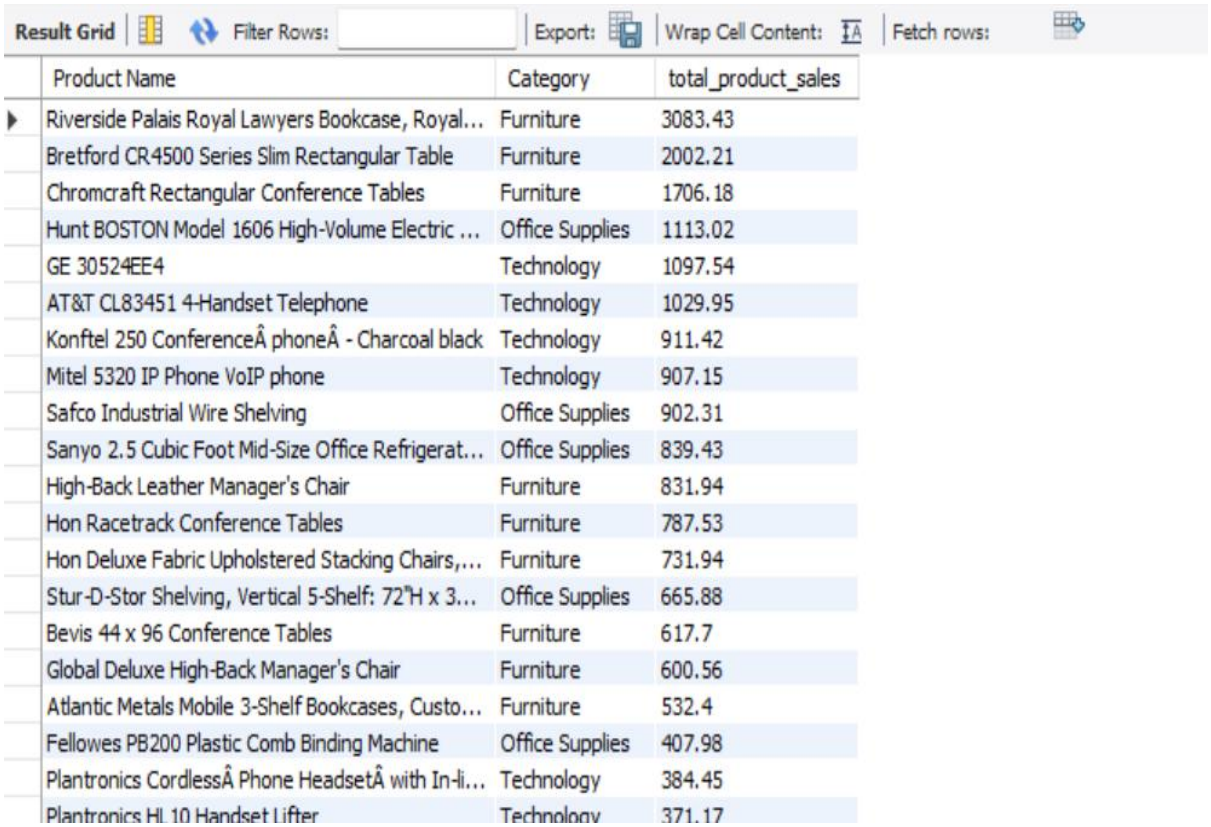

Segment	unique_customers	total_orders	total_revenue	avg_order_value
Consumer	36	92	19343.59	210.26
Corporate	20	33	5715.72	173.2
Home Office	13	20	3550.63	177.53

Insight: The consumer segment is the primary revenue driver, contributing $19,343.59(69.8%) of total revenue from 92 orders and 36 unique customers,

with the highest average order value of $210.26. The corporate segment ranks second with 20 customers,33 orders, $5,715.72 revenue and $173.20 average order value. Home office is the smallest segment with 13 customers,20 orders and $3550.63 revenue, but its average order value of $177.53 is higher than corporate, indicating better value per transaction despite lower volume. Overall, the business is heavily dependent on the consumer segment for both volume and value, while home office shows potential for higher-value sales.

20. Find top-performing products by total sales revenue

```
SELECT `Product Name`, Category, ROUND(SUM(Sales), 2) AS
total_product_sales FROM global_superstore GROUP BY `Product Name`,
Category ORDER BY total_product_sales DESC LIMIT 25;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows:

Product Name	Category	total_product_sales
Riverside Palais Royal Lawyers Bookcase, Royal...	Furniture	3083.43
Bretford CR4500 Series Slim Rectangular Table	Furniture	2002.21
Chromcraft Rectangular Conference Tables	Furniture	1706.18
Hunt BOSTON Model 1606 High-Volume Electric ...	Office Supplies	1113.02
GE 30524EE4	Technology	1097.54
AT&T CL83451 4-Handset Telephone	Technology	1029.95
Konftel 250 ConferenceÂ phoneÂ - Charcoal black	Technology	911.42

Fellowes PB200 Plastic Comb Binding Machine	Office Supplies	407.98
Plantronics CordlessÂ Phone HeadsetÂ with In-li...	Technology	384.45
Plantronics HL10 Handset Lifter	Technology	371.17

Insight: The analysis shows that a small number of top-performing products generate a significant share of total sales revenue. Furniture products dominate

the highest sales, followed by Technology and Office Supplies. This highlights the importance of maintaining sufficient stock levels and focusing on high-performing products to sustain revenue growth.

21. Track monthly sales performance trends to identify peak seasonal purchasing windows

```
SELECT DATE_FORMAT (STR_TO_DATE (`Order Date`, '%d/%m/%Y'), '%Y-%m') AS order_month, ROUND(SUM(Sales), 2) AS monthly_sales
FROM global_superstore GROUP BY order_month ORDER BY order_month;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

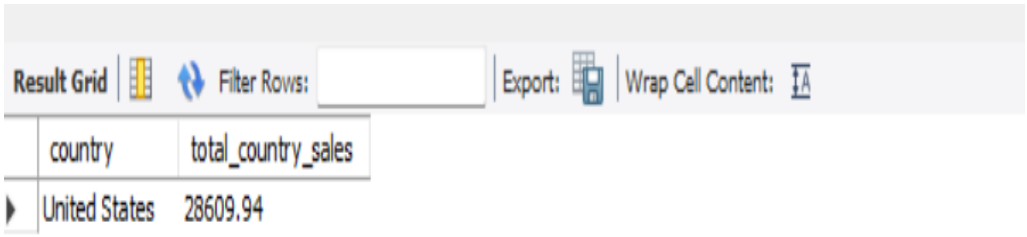

order_month	monthly_sales
2015-05	55.5
2015-06	3714.3
2015-08	444.02
2015-09	617.7
2015-10	342.14
2015-11	685.18
2015-12	1881.55
2016-01	99.26
2016-03	787.53
2016-04	1582.22
2016-09	5240.12
2016-10	1319.91
2016-11	678.9
2016-12	1228.95
2017-01	102.22
2017-03	63.44
2017-04	158.37
2017-06	1524.79
2017-07	77.88
2017-08	162.39

Insight: The monthly sales analysis shows significant fluctuations in sales across different months, with certain periods recording much higher sales than others. For example, June 2015, December 2015, September 2016, and June 2017 show relatively strong sales performance. These peaks indicate potential seasonal purchasing patterns, which can help the business plan inventory,

marketing campaigns, and resources more effectively during high-demand periods.

22. Identify top countries contributing to international sales revenue (if applicable in global records)

```
SELECT country, ROUND (SUM (sales), 2) AS total_country_sales
FROM global_superstore GROUP BY country ORDER BY total_country_sales
DESC LIMIT 20;
```

country	total_country_sales
United States	28609.94

Insight: The analysis shows high geographical concentration of revenue, with the United States dominating international sales. As the leading market with $28,609.94 in sales, it significantly outperforms other countries. This indicates the U.S is the strongest and most valuable market in the dataset. Business strategy should focus on sustaining U.S performance while benchmarking other countries against it and analysing top product categories within the U.S to replicate success in lower-performing regions.

CONCLUSION

The Global Superstore Retail Sales & Performance (2021–2025) project successfully demonstrated the capabilities of MySQL 8.0 in transforming more than 9,800 global retail transactions into meaningful business intelligence. By applying a structured range of SQL techniques, including filtering, aggregation, GROUP BY, subqueries, Common Table Expressions (CTEs), and analytical window functions, the project converted raw transactional data into clear and actionable insights. The analysis provided a comprehensive understanding of sales performance, customer segments, product categories, regional contribution, and shipping patterns.

The analysis revealed several important business trends across the dataset. The West and East regions were the leading revenue contributors, collectively accounting for more than 61% of total revenue, with the West contributing 31.40% and the East 29.60%. The Consumer segment generated the highest share of sales at 50.76%, followed by corporate customers at 30.44% and Home Office customers at 18.79%. Across product categories, Technology contributed 36.59%, followed by Furniture at 32.22% and Office Supplies at 31.19%, demonstrating a relatively balanced product portfolio. In terms of logistics, Standard Class was the most frequently used shipping method, accounting for 59.29% of total shipments.

Based on these findings, several strategic opportunities can support future business performance. The organization can strengthen customer retention through targeted loyalty programs and account-management strategies, particularly for high-value corporate customers. Supply chain and inventory management can be optimized by improving fulfilment processes, controlling inventory levels, and reducing unnecessary holding costs. Additional marketing and resource allocation in relatively lower-performing regions such as the South and Central regions could support balanced geographical growth. Furthermore, historical sales trends can be used for seasonal capacity planning, allowing the organization to prepare inventory, staffing, warehouse capacity, and delivery resources ahead of periods of increased demand.

Overall, this project demonstrates how MySQL and advanced SQL analytics can bridge the gap between raw transactional data and strategic business decision-making. The systematic analysis of sales, customers, products, regions, and shipping operations provides valuable insights into business performance and operational efficiency. The project highlights the importance of using data-driven approaches to optimize resources, understand customer behavior, improve operational processes, and support sustainable long-term business growth.
